## **Executive Summary**

---

The Plateau State Drugs and Medical Commodities Management Agency (PSDMCMA) plays a vital role in delivering accessible, affordable, and safe medicines to health facilities across the state. However, current processes face issues of manual tracking, inefficient inventory controls, and fragmented decision-making due to the lack of timely, data-driven insights.

This proposal introduces a futuristic, automated MySQL-powered database system—engineered to enhance data visibility, reduce wastage, optimize operations, and drive predictive planning. It integrates inventory, logistics, procurement, human resources, and decision dashboards in a centralized platform.

---

# CHALLENGE SUMMARY

*The present challenges include:*

 Fragmented stock records

 Expired or wasted drugs

 Limited data to make quick decisions

 Manual staff tracking (no transparency)

# VISIONS & GOALS

 Digitally track every medicine: Digitize all PSDMCMA inventory and staff management processes

 Automated low-stock & expiry alerts: Automate stock monitoring and expiry tracking

 Real-time dashboards for leaders: Enable forecasting through monthly trend analysis

 Staff accountability & training monitoring: Enhance accountability through attendance, training, and access control logging

 Support remote health centers faster: Support real-time decision-making via executive dashboards

## Real-Time Inventory

Automated Replenishment

Expiry Prevention

## Staff Performance

Smart Task Allocation

## Procurement

Supplier Performance Analytics

# SYSTEM ARCHITECTURE OVERVIEW

*The proposed system comprises five main components:*

## A. Inventory and Supply Chain Module

Manages all product entries, batch records, disbursements to facilities, and procurement from suppliers.

## B. Automation Engine

Handles real-time updates, expiry alerts, and low-stock warnings using SQL triggers and events.

## C. Personnel Management

Digitally tracks staff roles, attendance logs, training certifications, and access permissions.

## D. Analytics & Reporting

Offers live reports and predictive dashboards for stakeholders to make timely, informed decisions.

## E. Security & Access Control

Ensures each user has role-based privileges for viewing, editing, or approving transactions.

# Database Schema Highlights

## *Core Tables:*

- ❑ Facilities: Captures details of hospitals and health centers
- ❑ Products: List of all drugs and commodities
- ❑ Inventory: Stock levels per product per facility
- ❑ Disbursements: Records outgoing stock to facilities
- ❑ Procurements: Captures purchases from suppliers

*Each table is interlinked to support referential integrity and traceability.*

# SQL Automation Features

*To ensure proactive operations, the system is equipped with:*

## **INVENTORY TRIGGER**

Automatically subtracts disbursed stock from facility inventory.

## **LOW STOCK PROCEDURE**

Generates a report of items below a specified threshold.

## **EXPIRY MONITORING EVENT**

Daily background check logs drugs expiring in 30 days.

## **MONTHLY CONSUMPTION VIEW**

Aggregates usage patterns for forecasting and procurement planning.

*These tools move PSDMCMA from reactive to predictive supply management.*

# Personnel Intelligence System

*Staff play a crucial role in the pharmaceutical supply chain. The following modules support HR performance, planning, and oversight:*

## STAFF

Stores full profiles of personnel and links them to the facility they're assigned to.

## ATTENDANCE LOG

Tracks work attendance and helps generate timesheets and duty compliance reports.

## TRAINING RECORDS

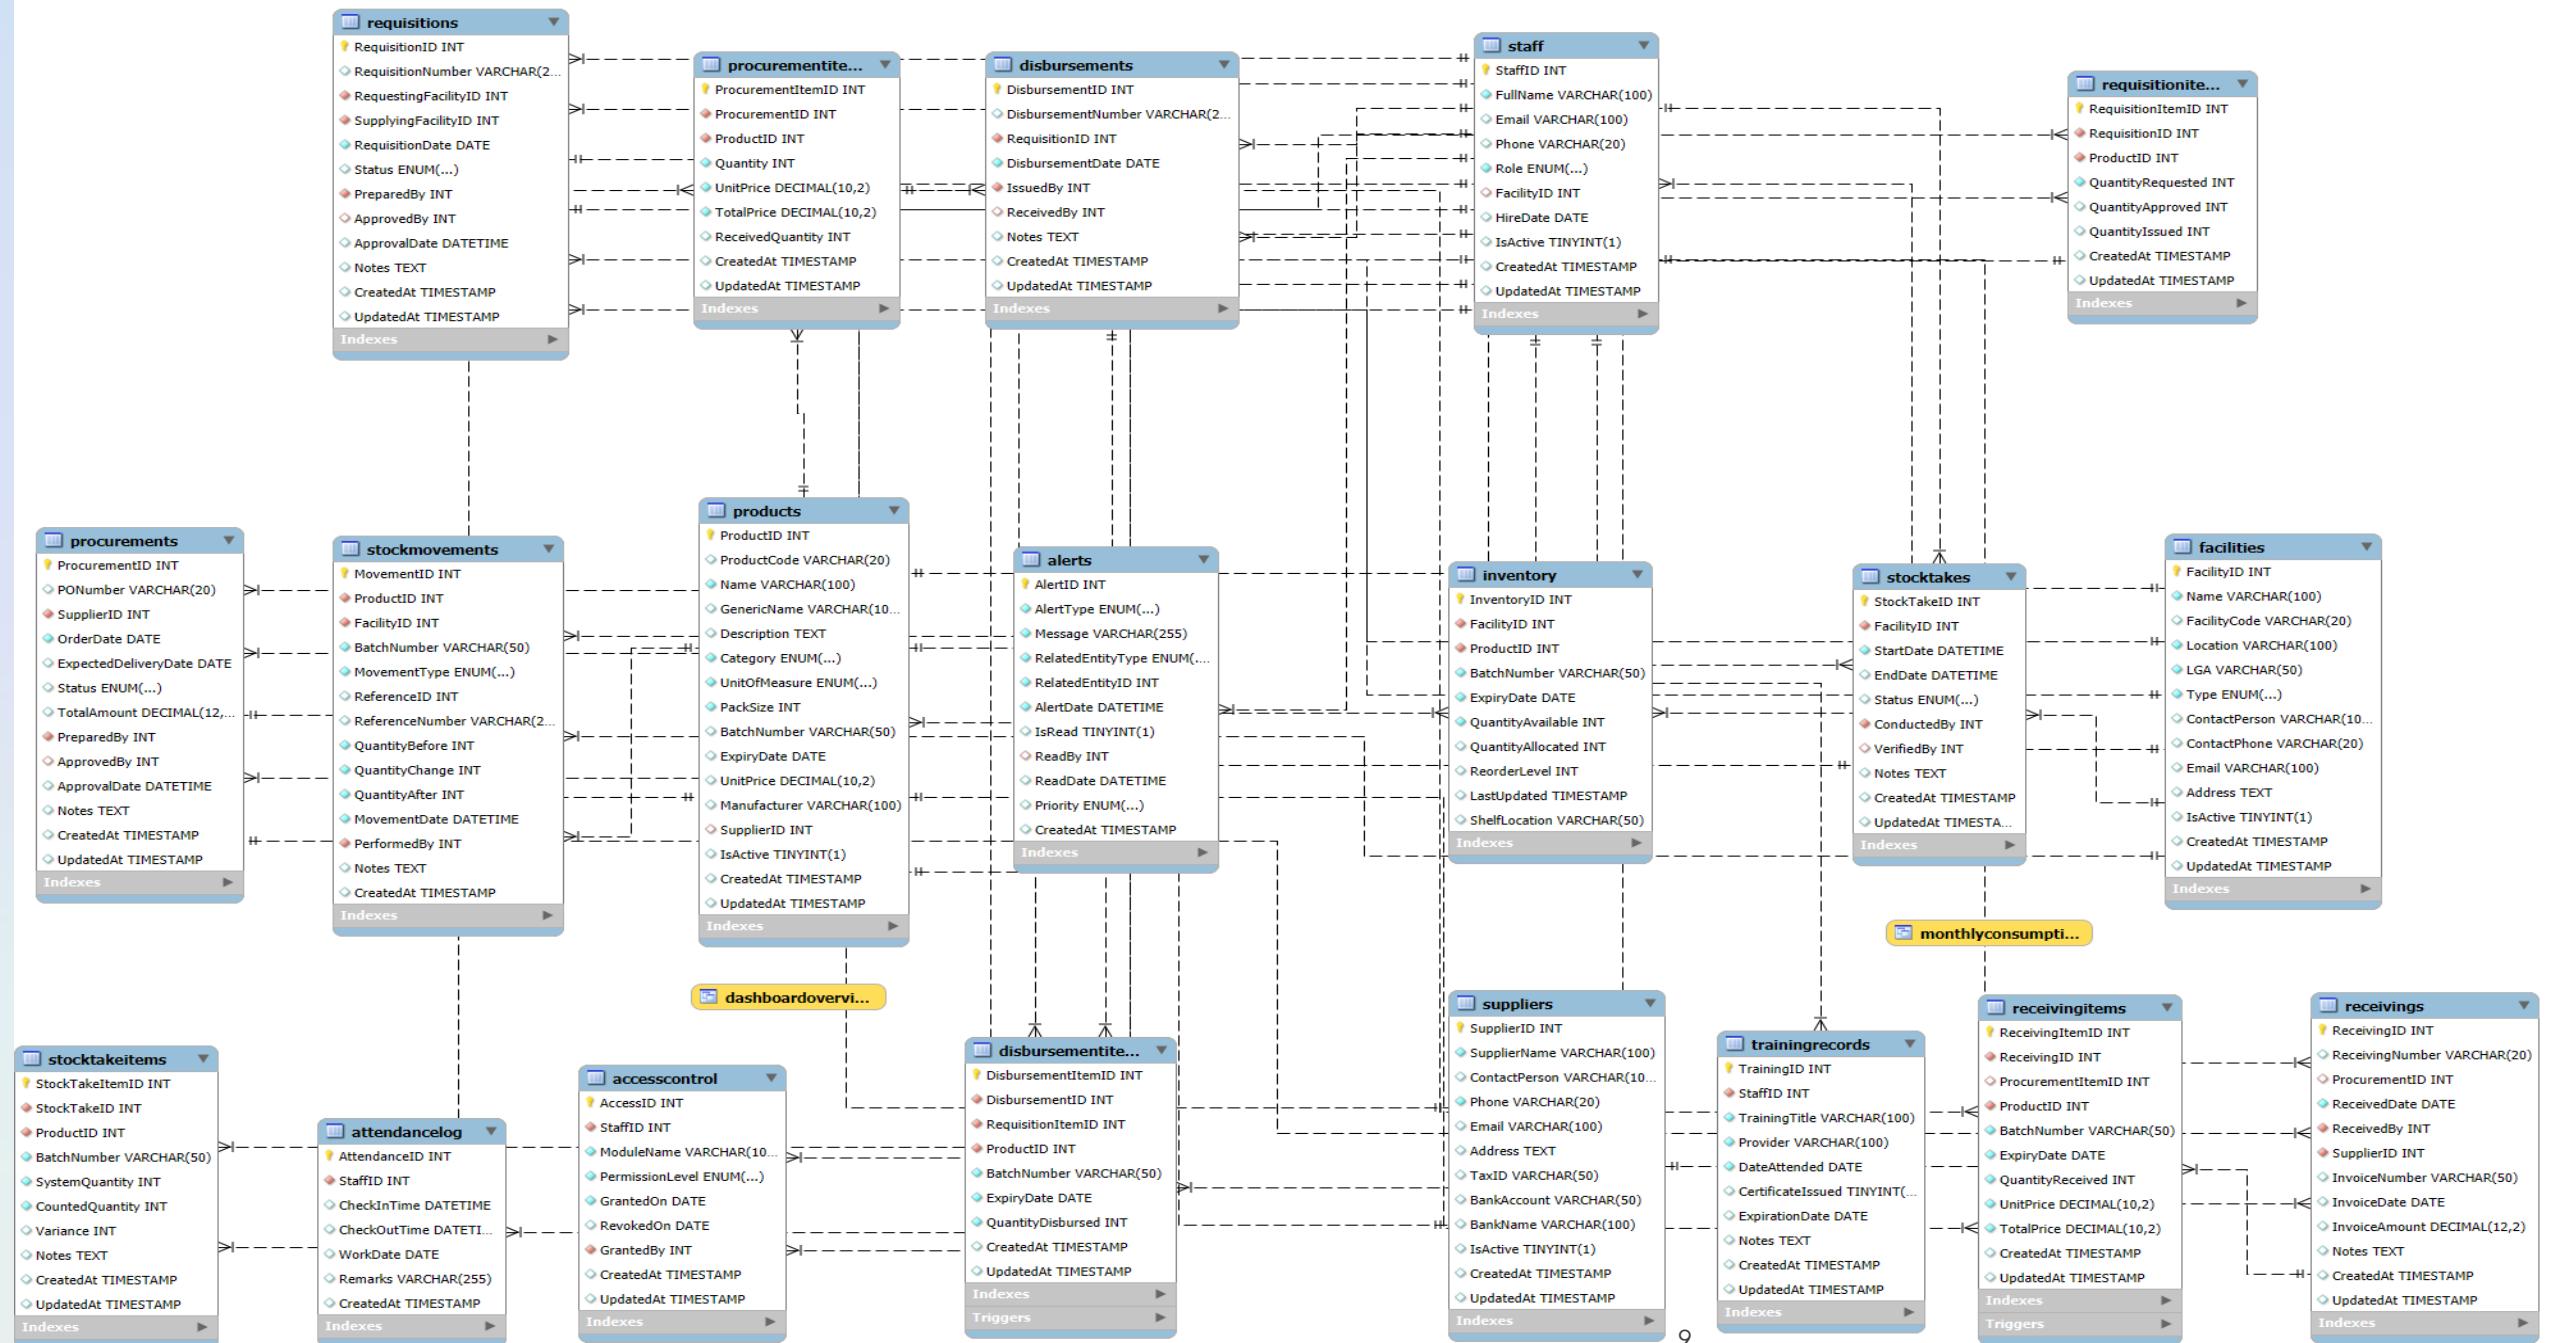

Archives past workshops, certificate expirations, and professional development logs.

## ACCESS CONTROL

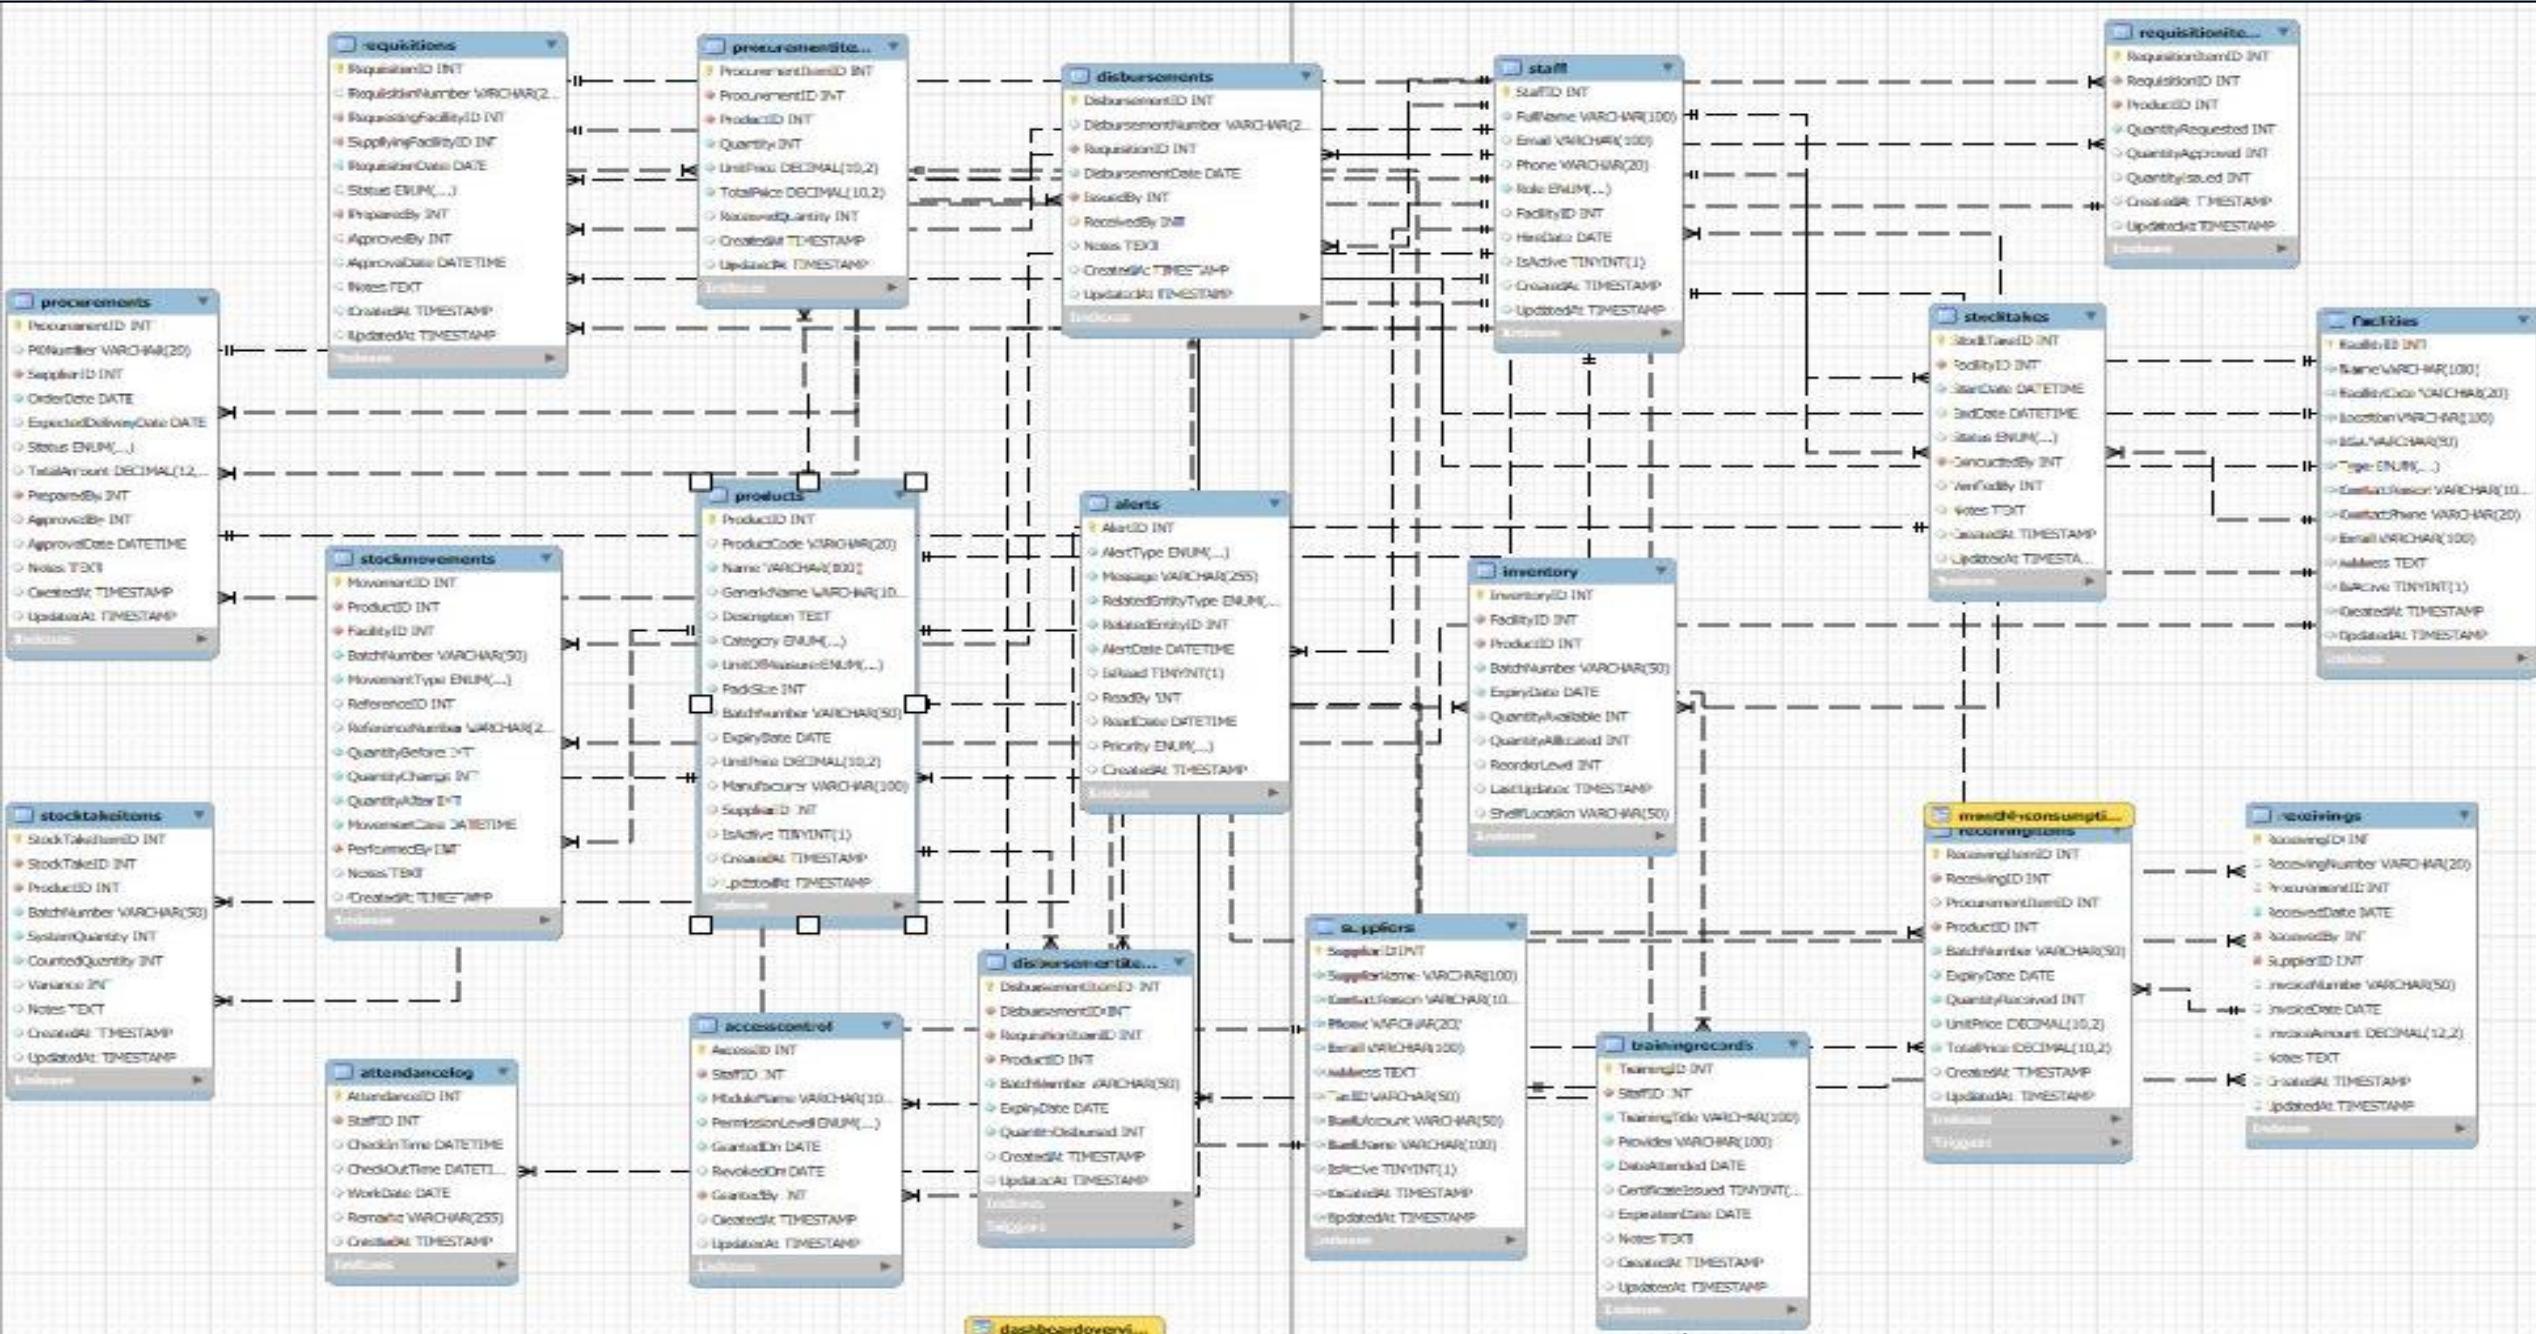

Defines who can view, modify, or approve data in modules such as inventory or procurement.

*This ensures accountability, enhances compliance, and strengthens workforce planning.*

# ERD

# ERD

# DASHBOARD & EXECUTIVE VIEW

*A consolidated SQL view—Dashboard Overview—was created to enable:*

**Monitoring of facility-level stock and expiry status**

**Classification of stock health (Low, Moderate, Healthy)**

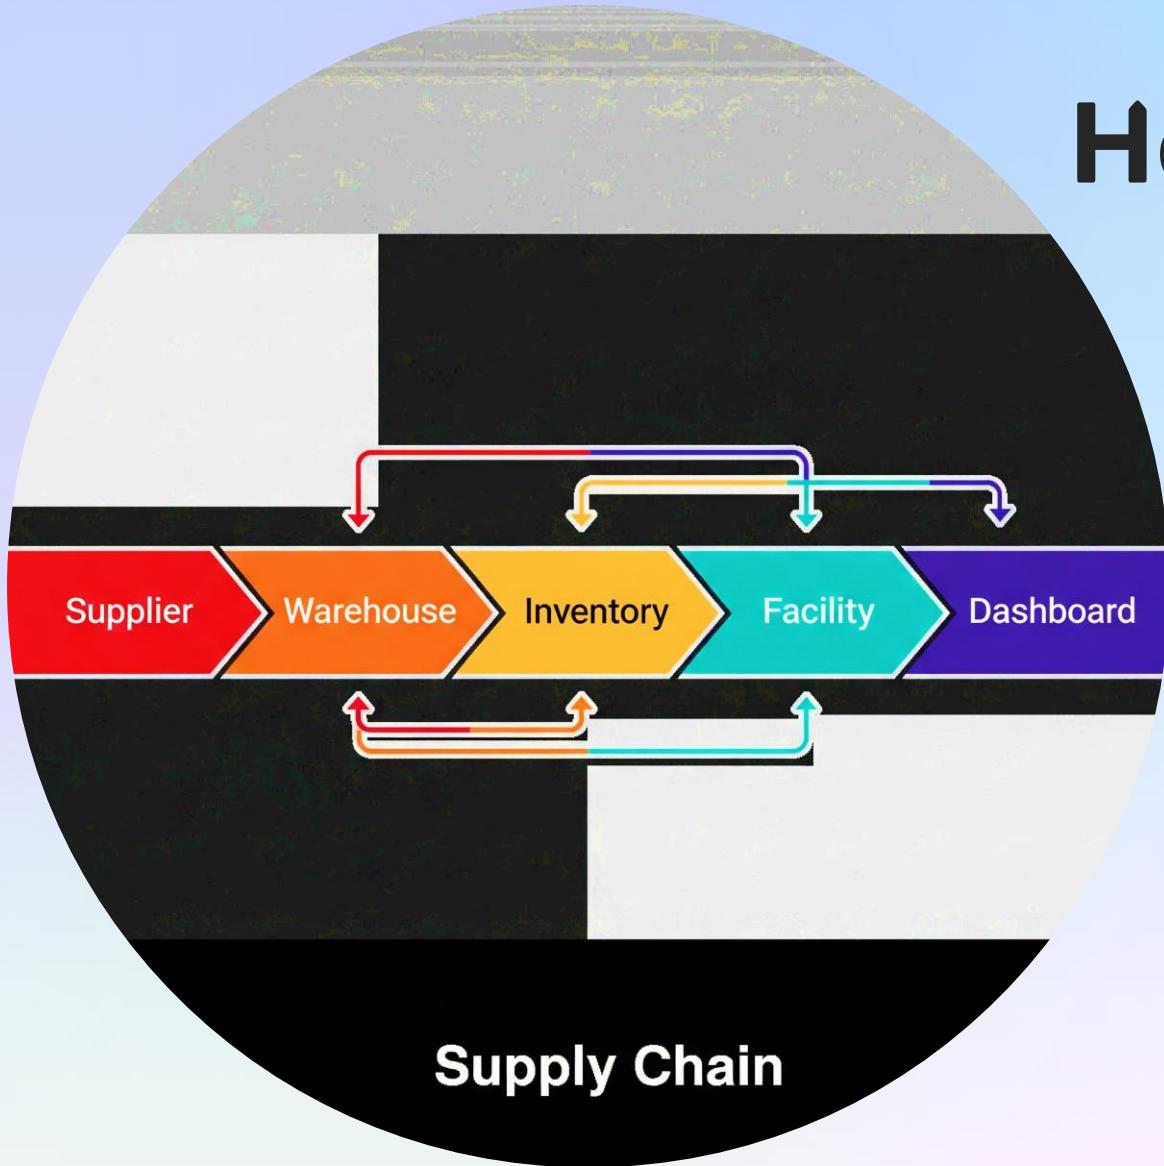

**Trend comparison with prior monthly usage**

**Real-time alerts on low inventory or soon-to-expire products**

**This connects seamlessly with dashboard platforms like Power BI, Metabase, or Tableau for visual insights.**

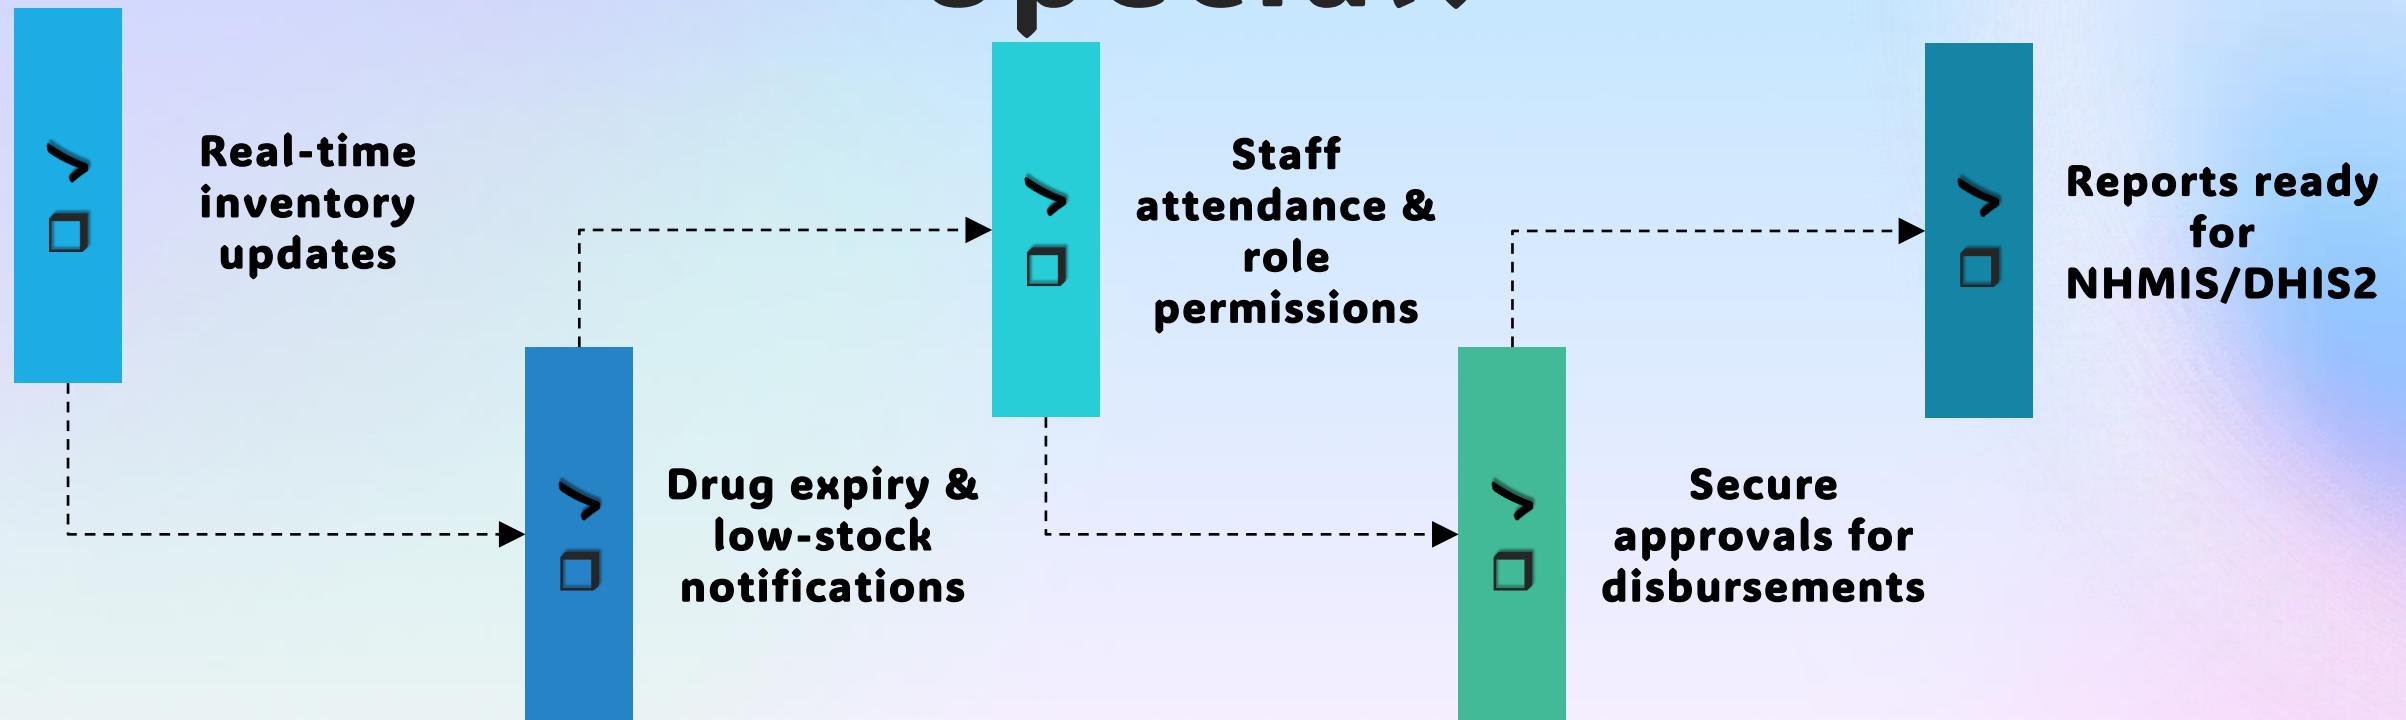

# How does all these really work?- simplified

- Medicines come in → added to the system
- Inventory updates automatically as drugs move
- System alerts staff before stock runs out or expires
- Managers see everything in real-time
- Staff check-in and training logs are tracked digitally

## SMART FEATURES

# What Makes This System Special?

## WHAT STAKEHOLDERS GAIN

# What This System Means for You!

REDUCE SHORTAGES

SAVE MONEY

MAKE BETTER DECISIONS

INCREASE TRUST & COMPLIANCE

BOOST STAFF PERFORMANCE

Get notified before stock runs out

Less waste from expired medicines

Live reports and planning tools

Secure, logged approvals

Track training and attendance

The dashboard features several sections:

- Mashboard**: A navigation menu on the left with items like 'Home', 'Dashboard', 'Medicines', 'Coprice', 'Couce', 'Abile', 'Sprints', 'Marie', 'Bord', and 'Corce'.
- Stock Levels by Location**: A map showing green dots representing stock levels across different locations.
- Expiry Alerts & Risk Scores**: A table showing items, risk scores, and usage percentages.
- Monthly Usage Forecasting**: A line graph showing usage trends over time.
- Benthly Usage Grasices**: Icons for Medicines, Surgeries, and Copainis.
- Staff Status Reports**: A table showing staff performance metrics.
- One-Click Official Reports**: A section with a button for 'Critical Reports'.

Items	Risk	Used	Risk
Anaiteed Shell Scores	20%	20%	18.0%
Temairing Soud	21%	30%	25.0%
Table Fration Sarie	31%	30%	25.0%
Trial Frell Soud	49%	20%	23.0%

Items	Status	Desire	Marie
Workfore	2000S	81%	4%
Depofoler	38 WS	2000S	21%
Adara Site	22 WS	4000S	1%
Oriant Fertice	03 WS	2000S	31%
Saily Setifice	20 WS	1000S	51%
Jilie Setifice	20 WS	1000S	21%

# Building a Smarter Workforce

 STAFF PROFILES & FACILITY ASSIGNMENTS

 GPS-LINKED ATTENDANCE LOGS

 TRAINING HISTORY AND GAP DETECTION

 ACCESS CONTROL BY JOB ROLE

 AUDIT LOGS FOR ACCOUNTABILITY

## Smart Personnel Management

LET'S START STRONG AND SCALE

## PILOT PLAN & ROLLOUT

# SUMMARY

- WITH THIS SET UP WE'RE BUILDING A SIMPLE DIGITAL SYSTEM TO HELP PSDMCMA TRACK MEDICINES BETTER. IT SHOWS WHEN DRUGS ARE RUNNING LOW OR GETTING CLOSE TO EXPIRY.
  - STAFF CAN BE MONITORED MORE EASILY, AND APPROVALS ARE MORE SECURE. REPORTS AND UPDATES HAPPEN INSTANTLY, WITHOUT PAPER OR DELAY.
- THIS SYSTEM HELPS EVERYONE MAKE FASTER, SMARTER DECISIONS FOR BETTER HEALTHCARE.

“

**This isn't just software**

**—it is infrastructure for better governance, better health outcomes, and a smarter future for Plateau State.**

”

Let's pioneer it. Together.

# THANK YOU
